Non-Interactive Personal Website

Overview

A non-interactive personal website is a basic type of website that presents personal information such as hobbies, interests., photos, and background details. It allows visitors to view the content but does not support interaction like commenting or messaging. Creating this type of website helps students develop creativity, organization, and basic web design skills Using platforms like Weebly.

Objectives

To create a simple and well-organized personal website To present personal information in a creative way To enhance basic skills in website design and layout

Result of Table

Domain Name / (URL) of your Non-Interactive Personal Website	Rham.weebly.com
Theme You Used	Simple Personal Theme
What Is Your Motto?	"Every setback Is a setup for a comeback"
How many images you put on your personal	1 image
What can you say about your personal website?	My website is simple, clean, and organized. It shows my personal information, interests, and some photos that represent who I am.
Is it difficult to make website online, why and why not?	No, it is not very difficult because website builders provide templates and tools. However, it still requires creativity and proper arrangement to make it look good.

Answer for Number 2

In creating my non-interactive personal website, I followed a simple and organized layout to make it easy to understand and navigate. I included important sections such as the homepage, about page, gallery, and contact page to complete the website.

On the homepage, I placed a short introduction to welcome visitors.

The about page contains my personal information, interests, and hobbies. In the gallery, I added some images that represent my personality and experiences. The contact page includes basic details so that visitors can reach me.

I used simple colors, readable fonts, and a clean design to make the website visually appealing. I also made sure that the layout is not too crowded so that the content is easy to read.

Analysis

Creating a non-interactive personal website helped me understand the basic process of designing and organizing content online. At first, I thought making a website would be difficult, but using a website builder made it easier because of ready-made templates and tools.

I learned the importance of choosing the right layout, colors, and images because they affect how the website looks. A simple and clean design makes the content easier to read and understand. Adding personal details and pictures also makes the website more meaningful and unique.

This activity improved my creativity and planning skills. I also became more confident in using online tools and designing a basic website. Overall, I learned that creating a website is not only about design but also about presenting information clearly.

Findings

I learned that creating a non-interactive personal website is a good way to express myself, to share information, and to improve my basic web design skills.
